

THERE ARE GOOD ARGUMENTS FOR BETTER AIR HYGIENE

- 99% LESS VIRUSES & BACTERIA
- LESS RISK OF INFECTION
- LESS SICK LEAVE
- MORE SECURITY AND TRUST

Despite all the precautionary measures, air in closed rooms will always include Viruses, bacteria and other microorganisms that pose a risk of infection. Basically: the higher the frequency, and the longer people stay in the premises, the higher the risk of infection. The pure UVC air disinfection, known from the medicine and food industry, neutralizes over 99.9% of all viruses and microorganisms from the air. This way you can permanently reduce the risk of infection and increase safety for yourself, your employees and your customers. Because our health is the greatest good.

Do the self-check and see whether you can also benefit from pure:

- The protection of my employees is important to me. High sick leave would be a problem for us
- I care about security and trust of my customers and I want to offer them more than the competitors
- The fear of a possible infection is an issue that makes employees or customers feel insecure
- I have facilities in which several people are surely staying for a longer period of time
- I have facilities that are regularly frequented by many different people
- I also have employees or customers with an increased need for protection (e.g. risk groups)
- Infections in my company could mean a high financial loss for us

Did you answer yes at least once? An appointment with us is the right step! We will show you how you can reduce the risk of infection and increase the safety of employees and customers with pure air. Use our contact form to make an appointment for a phone consult.
